

ShiningRx.com — Google Search Console

Performance Report

Period: December 2025 – March 2026 | 3 Months Data

WHAT EACH METRIC MEANS

Total Clicks — 94 94 real people searched something on Google, saw ShiningRx in the results, and clicked on it. No paid ads. No boosting. Pure organic traffic. For a new pharmaceutical export website with minimal content published — this is a genuine start.

Total Impressions — 1.48K (1,480) Google showed the ShiningRx website in search results 1,480 times over 3 months. Every time someone searched a relevant keyword and ShiningRx appeared — even if they scrolled past it — that counts as one impression. 1,480 impressions means Google has found, indexed, and is actively showing the website. The foundation is working.

Average CTR — 6.3% CTR means Click Through Rate. Out of every 100 people who saw ShiningRx in Google search results — 6.3 of them clicked through to the website. This is the most impressive number in the entire report. The global B2B industry average CTR is 2–3%. ShiningRx is achieving 6.3% — more than double the average. This tells us the page titles and meta descriptions are working extremely well.

Average Position — 27.3 This is where ShiningRx currently ranks on Google on average. Google shows 10 results per page. Position 27 means ShiningRx is appearing on page 3 of Google search results. This is the single biggest challenge and the single biggest opportunity. Moving from page 3 to page 1 is the entire SEO goal for the next 90 days.

KEY INSIGHTS

What Is Working

CTR of 6.3% is Outstanding This is the standout number in the entire report. Most B2B websites — even established ones — struggle to achieve a 3% CTR. ShiningRx is at 6.3% from day one. This means two things. First — the meta titles and descriptions written for the pages are highly relevant to what people are searching. Second — when people see ShiningRx in search results, something about the listing convinces them to click. That is not easy to achieve and it should not be taken for granted.

Google Has Already Indexed the Website 1,480 impressions means Google's crawlers have found the website, read its content, and decided it is relevant enough to show for pharmaceutical-related searches. For a new website — getting indexed and generating impressions quickly is not guaranteed. ShiningRx has cleared this hurdle.

94 Clicks With Zero Paid Advertising Every single one of those 94 clicks came without spending a single rupee on Google Ads. That is 94 potential buyers — hospitals, distributors, procurement managers — who found ShiningRx purely through organic search. As content grows and position improves, this number will compound significantly.

Impressions Are Growing Looking at the graph in Image 3, the orange impressions line shows a general upward trend from January 2026 through March 2026. This means Google is showing ShiningRx for more searches over time — even without aggressive SEO work being done. This upward momentum will accelerate significantly once blogs are published.

What Is Not Working Yet

Average Position 27.3 — Page 3 of Google This is the core problem. Over 90% of all Google clicks go to page 1 results — positions 1 through 10. Being on page 3 means the vast majority of people searching for pharmaceutical exporters from India never see ShiningRx at all. The 1,480 impressions and 6.3% CTR could translate into thousands of clicks per month if the average position moves to page 1.

Low Total Impressions for a 3-Month Period 1,480 impressions over 3 months — roughly 493 impressions per month — is low for a pharmaceutical export business targeting international buyers. This is directly linked to the number of pages and keywords the website currently ranks for. More published content means more keywords. More keywords means more impressions. More impressions at 6.3% CTR means dramatically more clicks.

Click Volume is Still Low at 94 Total 94 clicks over 3 months works out to approximately 31 clicks per month or roughly 1 click per day. For a B2B export business where one converted enquiry can be worth thousands of dollars — even 1 click per day has real value. But the potential with improved position and more content is 10 to 20 times this number within 6 months.

Position Needs to Move from 27 to Under 10 The difference between position 27 and position 7 is not just a number. Research shows that position 1 gets approximately 28% of all clicks.

Position 7 gets approximately 4%. Position 27 gets less than 0.5%. Moving from position 27 to position 7 would roughly multiply clicks by 8 to 10 times — without changing anything else.

PROFESSIONAL CASE STUDY

Business Context ShiningRx is a Mumbai-based licensed pharmaceutical exporter specialising in oncology drugs, cancer medicines, and specialty injectables. The website targets B2B buyers — hospitals, distributors, and procurement teams — across the Middle East, Africa, and Southeast Asia. The site is in its early organic growth phase with no paid search advertising running.

Performance Summary Over the 3-month period from December 2025 to March 2026, ShiningRx generated 1,480 impressions and 94 organic clicks in Google Search with an average CTR of 6.3% at an average position of 27.3.

Headline Finding The 6.3% CTR is the defining metric of this report. It significantly outperforms the B2B pharmaceutical industry benchmark of 2–3% and confirms that the website's search appearance — its title tags and meta descriptions — are compelling and relevant to searcher intent. The primary constraint on growth is not click-through quality. It is visibility. ShiningRx needs to move from page 3 to page 1.

Core Opportunity If the average position improves from 27.3 to 10 or below — while maintaining the current 6.3% CTR — clicks would grow from 94 per quarter to an estimated 400 to 600 per quarter based on the impression volume. If impressions also grow through content publication — from 1,480 to 5,000 — the combined effect could produce 300 to 400 clicks per month from organic search alone.

Growth Trajectory The impressions trend line in the Search Console graph shows consistent upward movement from January through March 2026. This organic momentum — achieved without any structured content or link building strategy — confirms that a focused SEO effort will compound this growth significantly.

MARKETER THINKING

Exactly What to Do Next — Priority Order

Fix This Week — Highest Impact

Submit All Blog URLs to Google Search Console Every blog we have written needs to be submitted to Google Search Console immediately after publishing. Go to Search Console → URL Inspection → paste the blog URL → Request Indexing. This tells Google to crawl and index the new page immediately rather than waiting weeks for it to find it naturally.

Expected impact: Each new indexed page adds new keywords ShiningRx can rank for. 7 blogs targeting 7 different keywords can realistically push average position from 27.3 to below 20 within 60 days.

Check Which Keywords Are Driving Current Impressions In Google Search Console — go to Performance → Queries. This shows the exact words people are typing into Google that are showing ShiningRx. These are your most valuable keywords right now. Write them down. Make sure every one of them appears naturally in your homepage H1, H2 headings, and meta description.

Do This Month — Position Improvement

Publish All 7 Blogs Consistently on Schedule This is the single highest-impact action available right now. Each blog targets a different high-value keyword. Each published blog creates a new page that Google can rank. More ranked pages means more impressions. More impressions at 6.3% CTR means significantly more clicks — every single month.

Keyword targets across 7 blogs:

pharmaceutical exporter from India

documents required to import medicines from India

oncology drug exporter India

how to choose reliable medicine exporter

cold chain medicine exporter India

India pharma export 2026

pharmacy of the world India

Improve Page Titles for Position 20–30 Keywords In Search Console — filter queries by position between 20 and 35. These are keywords where ShiningRx is close to page 2. A small improvement in page quality or title relevance for these keywords can push them onto page 2 or page 1. This is called the low-hanging fruit strategy — small changes, significant results.

Add Internal Links Between All Published Pages Every blog should link to at least 2 other blogs and to the homepage contact form. Internal links tell Google which pages are most important and help spread ranking authority across the entire website. This alone can improve positions for multiple pages simultaneously.

Build This Quarter — Impressions Growth

Get Listed on Pharmaceutical Directories for Backlinks Backlinks from relevant websites are the fastest way to improve average position. Each backlink tells Google that ShiningRx is a trusted, real business. Target these directories immediately — all free or low cost:

IndiaMART — indiamart.com

ExportersIndia — exportersindia.com

Pharmexcil — pharmexcil.com

Justdial — justdial.com

TradeIndia — tradeindia.com

Kompass — kompass.com

Expected impact: 10 quality backlinks can move average position from 27 to below 20. 25 backlinks from relevant pharmaceutical directories can push multiple keywords to page 1.

Target — Grow Impressions from 1.48K to 5K in 90 Days With 7 blogs published and basic directory backlinks built — impressions should grow from 1,480 to 4,000–6,000 within the next quarter. At the current 6.3% CTR this translates to 250 to 380 clicks per quarter — nearly 4 times the current volume.

Share Every Blog on LinkedIn With Full Article LinkedIn posts that link back to ShiningRx blogs drive two things simultaneously — direct referral traffic from LinkedIn and social signals that tell Google the content is being shared and engaged with. Both improve search position over time.

SECTION 5 — TARGET METRICS NEXT 90 DAYS

Metric	Current	Target in 90 Days	How to Get There
Total Clicks	94	300+	Publish blogs, improve position
Total Impressions	1,480	5,000+	7 blogs published, directory listings
Average CTR	6.3%	Maintain 6%+	Keep strong meta titles and descriptions
Average Position	27.3	Under 15	Content + backlinks + internal linking
Keywords on Page 1	Unknown	3+ keywords	Target low competition pharma keywords
Keywords on Page 2	Unknown	5+ keywords	Push position 20–35 keywords forward
Indexed Pages	Low	10+ pages	Publish and submit all 7 blogs
Backlinks	Low	15+	Directory listings and LinkedIn

ONE LINE SUMMARY

ShiningRx has a 6.3% CTR — more than double the B2B industry average — proving the brand messaging is already working. The only thing standing between current performance and 5x more traffic is moving from page 3 to page 1. That happens through one thing — consistent, keyword-rich content published on schedule.
